

# See demand, price and sell— seamlessly

CoreConnect enables automotive recyclers to easily see demand, price, and sell Core parts.

Developed in partnership with Rebuilders Automotive Supply (RAS), the web-based application connects the demand for parts from manufacturers and rebuilders identified by RAS within your inventory in Hollander's Eden parts network. Further, for those yards using Hollander's Powerlink yard management system, seamless integration with CoreConnect automates the associated inventory management and sales process.

## Determine demand

CoreConnect makes it easy to find parts that can be sold at any point in the vehicle/part lifecycle — at auction, vehicle intake, in yard, in inventory, and before scrap. By running a report against your inventory you can identify high value parts; slow moving, low value, or excessive core inventory, or drill down or drill down on which parts currently in inventory could be sold. Further, by vehicle you can enter the VIN and the software will tell you which parts are in demand and their value.

## Simplify selling

CoreConnect provides the ability to print pick lists so users can pull the parts from inventory and print tags when the parts are added to the bin. When parts are added to the RAS Bin ("sold to RAS") they are automatically removed from Eden and Powerlink inventory, and de-listed if on eBay, HollanderParts.com or Hollander Storefront. If you decide not to sell the part to RAS, either by removing via CoreConnect or selling it through Powerlink, the part is automatically removed from the bin and the part inventory record is updated in Eden and Powerlink. When the RAS bin is full, CoreConnect will notify RAS to pick up the bin, total the amount RAS owes you, and electronically invoice them.

**CoreConnect makes it easy to find parts that can be sold at any point in the vehicle/part lifecycle.**
